

Summary of Compliance

Illicit Discharge Detection and Elimination (IDDE) FY1819

The IDDE program aims to respond and to resolve all spills, illegal discharges within the MS4 as soon as possible upon discovery. The Cities of Reno and Sparks conduct an annual field screening to investigate dry weather flows to identify any illicit discharges and connections to the Truckee River (BMP ID# MS4-03). Citizen reports by phone, email, or community system such as Reno Direct are used to identify and respond to illicit discharges as well as track responses.

Dry weather monitoring is performed annually. Flowing outfalls are screened in the field, qualitatively and quantitatively. The goal of dry weather monitoring is to identify illicit discharges and any cross connections between sewer and storm drain system that may exist, and make corrections. Public Service Announcements developed in FY1718 continue to be run on local media outlets.

Number of Incidents Reported

	FY1617	FY1718	FY1819
City of Reno	94	105	138
City of Sparks	109	89	68

Number of Cross-Connections Identified:

	FY1617	FY1718	FY1819
City of Reno	0	0	0
City of Sparks	0	0	0

Number of Flowing Outfalls:

	FY1617	FY1718	FY1819
City of Reno	3	4	3
City of Sparks	0	0	1
